

## KEY

---

Driven Senior System Analyst at SmartRecon with expertise in Java, Spring Framework, and PostgreSQL. Successfully translated client requirements into automated solutions, enhancing application functionalities and ensuring seamless integration. Strong analytical skills complemented by effective collaboration with cross-functional teams, leading to improved client satisfaction and streamlined reconciliation processes.

## EDUCATION

---

- IIIT RGUKT RK Valley, Kadapa, India
- B.Tech in Computer Science and Engineering May 2023
- CGPA:8.67/10

## SKILLS

---

Languages	Java, SQL, HTML
Frameworks	Spring, Spring MVC, SpringBoot
DataBases	PostgreSQL,MYSQL

## WORK EXPERIANCE

---

- Senior System Analyst SmartRecon,Hyderabad, India August 2023-Current
- Analyze client reconciliation requirements and translate them into functional and technical specifications for automation using the company's proprietary Java-based reconciliation platform.
- Develop and enhance application functionalities using Java, Spring Framework, and SQL to support client specific reconciliation workflows.
- Perform end-to-end deployment of the application in client environments (on-premise and cloud), including configuration, validation, and production rollout.
- Collaborate with cross-functional teams (development, QA, and client operations) to ensure seamless integration of new modules and system updates
- Conduct root cause analysis and performance tuning for application issues during client implementation and production support
- Create and maintain technical documentation, deployment guides, and process flow diagrams to support project delivery and future maintenance

## PROJECTS

---

- Developed automation workflows to connect and interact with SharePoint Online using Microsoft Graph API for file upload, download, and metadata management through Java-based utilities.
- Implemented secure authentication using OAuth2.0 and access tokens to fetch SharePoint site and document library data programmatically.
- Created Java modules to list, download, and synchronize SharePoint files, handling API responses, HTTP communication, and JSON parsing with libraries like HttpURLConnection and Jackson ObjectMapper.
